                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Regul. Pept. 65:185-196(1996).
-!- FUNCTION: Myoactive peptide. Increases the amplitude and frequency of spontaneous contractions and tonus of hindgut muscle.
-!- SUBCELLULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: Midgut.
-!- SIMILARITY: SOME SIMILARITY TO TACHYKININS.
-!- ALVALARITY: Muscopeptide; Amidation.
--- ALVALARITY: Muscopeptide; Amidation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

-!- CATALYTIC ACTIVITY: GTP + oxaloacetate = GDP + phosphoenolpyruvate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  -!- SIMILARITY: Belongs to the phosphoenolpyruvate carboxykinase [GTP]
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Mycobacterium intracellulare.";

Nucleic Acids Res. 21:1039-1039(1993).

-!- FUNCTION: One of the primary rRNA binding proteins, it binds directly to 16S rRNA where it nucleates assembly of the head domain of the 30S subunit. Is located at the subunit interface close to the decoding center, probably blocks exit of the E-site tRNA (By similarity).

-!- SUBUNIT: Part of the 30S ribosomal subunit. Contacts proteins S9 and S11 (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Tkalcevic J., Ashman K., Meeusen E.;
"Fasciola hepatica: rapid identification of newly excysted juvenile
                                                                                                                                                                                        01-FEE-1996 (Rel. 33, Created)

New factor IX/factor IXa antibodies and their derivatives useful for increasing amidolytic activity of factor IXa, and for treating blood coagulation disorders such as hemophilia A and hemorrhagic diathesis.

Claim 7; Page 74; 138pp; English.

The present sequence is that of complementarity determining region 3 (CDR3) of the heavy chain of an antibody expressed by mouse hybridoma 193/AD3. This antibody has anti-Factor IX (FIX) or anti-activated Factor IX (FIXa) activity. It is an example of anti-FIX/FIXa antibodies of the invention. Such antibodies and their derivatives (including those that comprise the present CDR3 peptide) have Factor VIIIa (FVIIIa) coffactor activity or FIXa activating activity. Administration of the antibodies or First, even in the presence of FVIIIa inhibitors. This allows for rapid blood coagulation even in the absence of FVIII or FVIIIa, and in the case of FVIII inhibitor patients. The antibodies or their derivatives are used

```
The sequences represent synthetic lanthionine bridged peptides. The peptides of the invention all comprise a lanthionine bridge, a thioether bond also called a monosulphide bridge. The peptides can be used as pharmacologically active agents, for example, as hormones, as neurotoxins and as plant regulating agents. The sequences have a higher biological activity than their corresponding naturally occurring peptides. This sequence represents a lanthionine-vasopressin peptide
                                                                                         Lanthionine bridged peptide; thioether bond; monosulphide bridge; hormone; neurotoxin; plant regulating agent; lanthionine-vasopressin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Lanthionine bridged peptide; monosulphide bridge; thioether bond; improved biological activity; vasopressin; somatostatin; enkephalin; endothelin; pharmaceutically active compound.

peptides of the invention all comprise a lanthionine bridge, a thioether bond also called a monosulphide bridge. The peptides can be used as pharmacologically active agents, for example, as hormones, as neurotoxins
                                                                                                                                                                                                     (I). (I) Have improved biological activity compared to the corresponding linear peptide. The present sequence represents a peptide given in the exemplification of the present invention
                                                                                                           New lanthionine bridged peptide compounds derived from naturally linear peptide e.g. virus related peptides.
                                                                                                                                                                                         The present invention describes lanthionine bridged peptide compounds
                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   sequences represent synthetic lanthionine bridged peptides.                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to lanthionine bridged peptides which are analogues of peptide compounds comprising a disulphide bridge. The disulphide bridge is replaced by monosulphide bridge or thioether bond, designated a lanthionine bridge. Such analogues or lanthionine bridged peptides have improved biological activity compared to the original peptides compounds e.g. vaeopressin, somatostatin, enkephalin, and endothelin. The lanthionine-bridged peptides are useful as pharmaceutically active compounds. ABU61701-ABU61724 represent lanthionine bridged peptides

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel lanthionine-bridged biologically active peptides e.g. vasopressin, somatostatin or enkephalin, useful as pharmaceutically active compounds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to lanthionine bridged peptides which are analogues of peptide compounds comprising a disulphide bridge. The disulphide bridge is replaced by monosulphide bridge or thioether bond, designated a lanthionine bridge. Such analogues or lanthionine bridged peptides have improved biological activity compared to the original peptide compounds e.g. vasopressin, somatostatin, enkephalin, and endothelin. The lanthionine-bridged peptides are useful as pharmaceutically active compounds. ABU61701-ABU61724 represent lanthionine bridged peptides
and as plant regulating agents. The sequences have a higher biological activity than their corresponding naturally occurring peptides. This sequence represents a lanthionine-oxytocin peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                            Gaps
                                                                                                                                                                                                                                                                                      Lanthionine bridged peptide; monosulphide bridge; thioether bond; improved biological activity; vasopressin; somatostatin; enkephalin; endothelin; pharmaceutically active compound.

Novel lanthionine-bridged biologically active peptides e.g. vasopressin, somatostatin or enkephalin, useful as pharmaceutically active compounds.
                                                                                                                                                                                                                      The present invention relates to lanthionine bridged peptides which are analogues of peptide compounds comprising a disulphide bridge. The disulphide bridge is replaced by monosulphide bridge or thioether bond, designated a lanthionine bridge. Such analogues or lanthionine bridged peptides have improved biological activity compared to the original peptide compounds e.g. vasopressin, somatostatin, enkephalin, and endothelin. The lanthionine-bridged peptides are useful as pharmaceutically active compounds. ABU61701-ABU61724 represent lanthionine bridged peptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A new polypyrimidine tract protein isoform useful for finding agents which modulate its activity and to prevent or treat allograft rejection or CD40 activation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Cow; polypyrimidine tract protein; isoform; RNA stability regulation; immunosuppressive; allograft rejection; CD154; PTB.
                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Bovine polypyrimidine tract binding protein conserved nonapeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                   .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                       셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                         The sequences represent synthetic lanthionine bridged peptides. The peptides of the invention all comprise a lanthionine bridge, a thioether bond also called a monosulphide bridge. The peptides can be used as pharmacologically active agents, for example, as hormones, as neurotoxins and as plant regulating agents. The sequences have a higher biological activity than their corresponding naturally occurring peptides. This sequence represents a lanthionine-vasopressin peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1. .6

                                     tract protein isoform. Also provided are methods for modulating the stability of a CD154 RNA. The methods are useful for increasing the stability of a RNA, decreasing the stability of a RNA, preventing or treating allograft rejection in a subject, inhibiting CD40 activation in a subject, and identifying agents that modulate the level or activity of a polypyrimidine tract protein. Agents which modulate the activity of a polypyrimidine tract protein. Agents which modulate the activity of a polypyrimidine tract protein. Agents which modulate the activity of a polypyrimidine tract protein are useful to prevent or treat allograft rejection or inhibit CD40 activation. The present sequence is a nonapeptide conserved between the bovine and human polypyrimidine tract
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to human immunopolypeptides, produced by a phage transfected cell library. The present sequence is one such immunopolypeptide. The immunopolypeptide have binding specificty for envelope glycoprotein E2 and nonstructural protein N83 of hepatitis C virus (HCV). E2 glycoprotein is believed to be responsible for target cell binding and contains neutralising epitopes, while N83 is thought to be involved in the replication of HCV. The immunopolypeptides are useful for diagnosing and treating a patient having or suspected to be having
                    The present invention provides the protein sequence of a polypyrimidine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human immunopeptide to HCV E2 glycoprotein light chain CDR #76.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention provides a cancer-associated epitope comprising two separate polypeptides, a cytokeratin 8 polypeptide and a cytokeratin 18 polypeptide. Vaccine composition of the invention is useful for treating or plyventing colon adenocarcinoma, ovarian adenocarcinoma, renal adenocarcinoma, mammary adenocarcinoma, lung adenocarcinoma, pancreatic adenocarcinoma or non-seminomal testis carcinoma. The invention is also useful for preparing a medicament for treating or preventing cancer in a mammal. The present sequence is human COU-1 cancer-associated epitope antibody VL (light chain variable region) CDR (complementarity
                                                                                                                                                                                                                                                                                     Human, cancer-associated epitope, cytokeratin K8; cytokeratin K18; VL, adenocarcinoma, therapy, cancer; antibody, light chain variable region, complementarity determining region; CDR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel isolated cancer-associated epitope comprising two separate polypeptides, a cytokeratin 8 polypeptide and a cytokeratin 18 polypeptide, useful as component of vaccine for preventing or treating adenocarcinoma.

                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAW70575-79 represent peptides used for peptide ligation, in the course of the invention. The specification describes IVPS (intervening protein sequence) regions which nerode peptides which are removed via protein splicing to form the native protein. The specification describes a modified protein comprising a target protein or portion, fused either internally or terminally, to a IVPS, or to an amino- or carboxyl-terminal element of a IVPS. The IVPS are capable of excision from or cleavage of the modified protein upon predetermined conditions, in cis or trans, e.g. temparature increase, deglycosylation, unblocking of amino acid residues, treatment with chemical reagents. The methods can be used for modifying, producing, purifying, labelling or isolating target proteins such as enzymes, toxins, cytokines, glycoproteins and growth factors
                                                                                                                                                                                                                                                                                                                                                                                       New modified target proteins - which have controllable intervening protein sequence which can facilitate production, purification, labelling or isolation of target proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Virucide, human; immunopolypeptide; immunopeptide; envelope glycoprotein; nonstructural protein; hepatitis C virus; HCV; E2 glycoprotein;

New human immunopolypeptide with binding specificity for certain envelope glycoproteins and nonstructural proteins of hepatitis C virus (HCV), for diagnosing or treating patients having or suspected of having HCV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to human immunopolypeptides, produced by a phage transfected cell library. The present sequence is one such immunopolypeptides have binding specificity for envelope glycoprotein E2 and nonstructural protein NG3 of hepatitis C virus (HCV). E2 glycoprotein is believed to be responsible for target cell binding and contains neutralising epitopes, while NS3 is thought to be involved in the replication of HCV. The immunopolypeptides are useful for diagnosing and treating a patient having or suspected to be having HCV infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Fox RI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Burton DR,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 1; Fig 17; 308pp; English.
NS3 protein; viral infection.
                                                                                                                                                                                                                                                                                                                                               25-JAN-2002; 2002WO-US002303.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Description
